

Installing Chuzzle Deluxe

This section provides information on installing Chuzzle Deluxe.

System Requirements

To be able to run Chuzzle Deluxe on your computer, make sure the following minimum requirements are met:

- Intel Pentium III 500 MHz or higher processor
- Windows 98/ME/2000/XP
- 128 MB RAM
- Sound Card
- SVGA Graphics Card
- DirectX 7

Installation Procedure

To install Chuzzle Deluxe on you computer, do the following:

1. Run the installation application downloaded from <http://get.games.yahoo.com/proddesc?gamekey=chuzzle>.
2. Click **Next**.
3. Click **Next** to accept the default location where Chuzzle Deluxe will be installed. If you prefer to install the program in a different location, click **Browse** and locate your preferred location.
4. Enter the Start Menu folder where the program's shortcuts will be created in or click **Install** to use the default location.
5. Click **Next** when installation is completed.
6. Click **Finish**.

Using Chuzzle

This section provides information on using Chuzzle.

Game Play

The game is played on a 6x6 board of Chuzzles. The goal is to move the Chuzzles so that in each turn a cluster of three or more Chuzzles are made and exploded. Moves are made by dragging rows and columns. The grid "wraps" around, so when Chuzzles are dragged off the grid, those on the left will reappear on the right, top Chuzzles will appear on the bottom, and vice versa. Some moves may require the player to drag edge Chuzzles to the middle. As Chuzzles are removed from the board new Chuzzles will appear from the top.

Various trophies are awarded to the player as events occur in the game, such as "Quad Combo" for making a quadruple combo explosion of Chuzzles. Another example is "Speed Master" for clearing two (2) levels in Speed Chuzzle without getting a lock.

First Run

The first time Chuzzle Deluxe is run, a new profile must be created. Afterwards, a new game in the Classic mode is started.

You can only access the other game modes after the first game is created or played.

Game modes

Chuzzle Deluxe has four (4) game play modes. These are:

- Classic mode – Players are allowed to take the time to make the best move possible and locks are added more frequently as the player proceeds.
- Speed mode – Locks are added when a lock meter is completely filled. As moves are made, the meter is depleted. As the player removes Chuzzles, they fill a beaker; when the beaker is full, the player moves on to the next level.
- Zen mode – Players are allowed to make moves at will. There are no locks or levels, but the player can earn charms.
- Mind Bender mode – Players have to put the Chuzzles in a certain position.

To select the game mode to play, do the following:

1. Click on **Menu**.
2. Click on **Main Menu**. Your current game will be saved.
3. Click **Ok**.

4. Click the game mode to play from the selection.
5. Select the difficulty of the game to play. Options are:
 - a. **Casual** - Locks do not appear until level 2 at the earliest, and the Chuzzles give 'soft hints' (See "Hints" for more details). In "Speed Chuzzles" the "Lock Bar" fills up more slowly, but speeds up as a player progresses through higher levels of play.
 - b. **Expert** - Locks come much earlier in Classic Mode, and more than one lock can often appear at a time. The Chuzzles also do not give 'soft hints'. In Speed Chuzzles the Lock Bar fills up faster, and the rate in which it fills up rises rapidly as a player progresses through the levels of play.
6. Click on **Click here TO PLAY** to start the game. To avoid the **How to Play** screen from being shown every time a new game is played, click **Do not show this again**.

Hints

If players are stuck in the game, Chuzzle Deluxe offers several ways out of such situations. They are as follows:

- **Hint button:** When the **Hint** button over the beaker in all modes of Chuzzle (except in Mind Bender Mode) is clicked, a move hint and exactly where to make it is provided. However, using hints will cost the player a portion of the beaker fluid, increasing the amount of time before the next level is reached.
- **Chuzzle actions:** In addition to the **Hint** button, the Chuzzles on the Casual gameplay level of any mode except the Mind Bender Mode will give players a "soft hint" by either rolling their eyes, or vibrating, to indicate where an available move is located. This does not tell the player exactly what the move is, but does provide a general idea.

On Expert difficulty, the Chuzzles do not roll their eyes or vibrate to help players find moves. In addition, a greater amount of beaker fluid is consumed when the **Hint** button is clicked.

Game Elements

The following items are elements that will be encountered while playing Chuzzle Deluxe.

Fat Chuzzles

Occasionally, the player may encounter Fat Chuzzles after they have removed at least a 2x2 square of regular Chuzzles. These Fat Chuzzles take up four times the space of regular Chuzzles, and thus present many problems. Some of these problems are:

- Fat Chuzzles cannot be dragged off the grid.
- Moving the Fat Chuzzle or the rows or columns that contain it will move BOTH rows or columns it spans. If a lock exists on one of the rows a Fat Chuzzle controls, neither row can move.
- If there is only one column of Chuzzles below a Fat Chuzzle, the Fat Chuzzle will push the column down until the columns that it spans below are level. While this process removes Chuzzles from the board, it has the potential to remove some possible moves from the board.

Super Chuzzles

A Super Chuzzle is formed when a group of five Chuzzles explodes simultaneously. It looks like a regular Chuzzle with a halo around it. When the Super Chuzzle is used in a cluster, it will cause all the Chuzzles immediately around it to explode.

Rainbow Chuzzles

A rainbow Chuzzle is a four color Chuzzle that appears occasionally. Using rainbow Chuzzles in a cluster is worth 100 times more than normal Chuzzles.

Locks

In Classic and Speed modes, the player will sometimes encounter locked Chuzzles that cannot be moved and prevent the column or row from being moved. To remove a lock, the player must use the locked Chuzzle in a cluster.

Scrambles

When the player is unable to make any moves because of locks, a Scramble can be used to change out the game board. Initially, the player starts with two scramble, but can earn more as they proceed. When the player cannot make moves and has no Scrambles, the game ends. Players earn a Scramble after scoring 150,000 points, again at 300,000 points, and then every 300,000 points thereafter.
